

**WHAT IS CLAIMED IS:**

1. A heat dissipating device comprises

a turbine-type fan having a plurality of blades; a cover covering the blades; a wind collecting mask installed below the cover; and a wind outlet  
5 formed in the wind collecting mask;

a heat dissipating seat installed below the turbine-type fan; and

a plurality of heat dissipating units extending from a surface of the heat dissipating seat between the seat and the turbine-type fan;

wherein wind is sucked by the turbine-type fan, then flows toward the  
10 wind collecting mask, then flows out of the outlet of the wind collecting mask to enter into the heat dissipating units and then flows to the heat dissipating seat for dissipating heat from the heat dissipating units and the heat dissipating seat.

2. The heat dissipating device as claimed in claim 1, wherein the surface  
15 of the heat dissipating seat is a concave surface.

3. The heat dissipating device as claimed in claim 1, wherein the surface of the heat dissipating seat is a convex surface.

4. The heat dissipating device as claimed in claim 1, wherein the heat dissipating units are post.

20 5. The heat dissipating device as claimed in claim 1, wherein the heat dissipating units are heat dissipating fins.
